### Current Status, Future Plans

#### **Current Status**

- Yices1, Yices2 supported
- All queries shown work

### Current Status, Future Plans

#### **Current Status**

- Yices1, Yices2 supported
- All queries shown work

#### Future Work (Ph.D. Thesis)

- Optimize generated queries
- Add support for more solvers
- Integrate tool more seamlessly with Haskell
- Explore implementation of formal tools, such as model checkers, built in Seri with reusable library components
